

Lets build a student excuse generator in c++ where student will write his name and excuse will generate, program should atleast carry 10-12 unique excuses. Excuses should be in english

```
vector<string> excuses = {  
    name + ", I could not complete the assignment because my internet stopped working unexpectedly.",  
    name + ", I was feeling unwell last night and could not focus on my work.",  
    name + ", there was a power cut at my home which delayed my progress.",  
    name + ", I misunderstood the deadline and thought it was due later.",  
    name + ", my system crashed and I lost all my progress.",  
    name + ", I had a family emergency that required my immediate attention.",  
    name + ", I was stuck helping a relative and couldn't get time to complete it.",  
    name + ", I accidentally worked on the wrong file and realized it too late.",  
    name + ", I was preparing for another exam and mismanaged my time.",  
    name + ", I faced technical issues with the software required for the assignment.",  
    name + ", I wasn't able to access the required resources in time.",  
    name + ", I started late due to personal reasons and couldn't finish it on time."  
};
```

english isnt correct in these sentences, if name is present dont use I in it, rewrite the excuses

Good catch—that phrasing was off. If the name is used, the sentence should be in **third person**, not “I”.

Here’s a corrected and cleaner version with proper English:

```
vector<string> excuses = {  
    name + " could not complete the assignment because the internet connection stopped working unexpectedly",  
    name + " was unwell last night and could not focus on the work.",  
    name + " experienced a power outage at home, which delayed progress.",  
    name + " misunderstood the deadline and believed it was due later.",  
    name + " faced a system crash and lost all progress.",  
    name + " had a family emergency that required immediate attention.",  
    name + " was occupied helping a relative and could not find time to complete the task.",  
    name + " accidentally worked on the wrong file and realized it too late.",  
    name + " was preparing for another exam and mismanaged time.",  
    name + " encountered technical issues with the required software.",  
    name + " was unable to access the necessary resources in time.",  
    name + " started late due to personal reasons and could not finish on time."  
};
```

What's fixed

- No "I" when the name is used
- Proper third-person grammar
- More formal and believable tone
